

Riverbank Park Plaza Serious About Saving Energy Serious About The Environment

Making annual savings of £63,000 on the boiler running costs is just part of The Riverbank Park Plaza's drive for saving energy and taking a responsible attitude to the environment.

"Here at the Park Plaza Group we take energy-saving and environmental issues very seriously. Like every business it is vital for us to reduce our costs wherever possible. We feel equally strongly about cutting our carbon footprint to the absolute minimum.

We work hard to find the best energy-saving products available. Lighting, boilers, water and refrigeration - at the Riverbank Park Plaza we have made dramatic savings in all these areas. But we intend to do even better in the future.

Our close working relationship with Flexi-Freeze Ltd and EnliDa, developed over a three year period, is based on trust and shared values. We expect EnliDa to play an important role in enabling us to meet our future energy-saving targets."
